

## **InMode Evoke Aftercare**

### **Post-Procedure**

Recovery after an Evoke treatment should be relatively simple and comfortable. You can expect little to no downtime, and even pain medication should be unnecessary. Following your treatment, you should be able to immediately return to your normal activities without any pain. There may be minimal redness, which is only temporary.

- It is best to stay away from saunas/ hot tubs/ hot baths, for the first 24 hours after treatment.
- If you have a “hot spot” or red area, simply ice it for 10 minutes to reduce the redness.
- Drink lots of water and stay hydrated

\*We cannot treat anyone who has been on Accutane within 6 months of treatment or has a lot of metal in the mouth.
